LOWER YOUR ENERGY COSTS AND HAVE THE GOVERNMENT PAY FOR IT!

Return On Energy (ROE) identifies and prioritizes strategies that will maximize energy efficiency and the return on investment by implementing solutions that incorporate the maximum federal, state and local tax incentives. Take action now before these tax incentives expire. Important: You may be due a tax refund for energy-efficient improvements since 2006.

IT'S WHAT YOU DON'T KNOW THAT WILL HURT YOU MOST.

>>> It starts with a Forensic Energy Audit

ROE provides the most advanced technological forensic energy auditing services using ASHRAE (American Society of Heating, Refrigerating, Air-Conditioning Engineers) standards and Trace 700, the industry's leading computer software. You receive a detailed report with extensive and precise break downs of your current annual energy use and costs. You will understand and have documented your building and its systems' efficiencies or inefficiencies.

>>> Building a Critical Path to Energy Efficiency

Your forensic energy audit may include a critical path that recommends and provides cost estimates for integrated energy efficient solutions, which maximize your **ROE** on quantifiable and measurable terms. Recommendations will cover renovations, construction, repairs and maintenance for Lighting, HVAC, Building Envelope, Hot Water, Controls and other "energy" systems.

>>> The Result: Maximum Return on Energy

ROE is unique in the industry because it takes the forensic audit process to another level. **ROE** is the expert in understanding the federal, state and local tax incentives and multitude of other programs available to maximize your return on investment and dramatically reduce the payback period for energy efficient solutions. Contact **ROE** for more information on:

1. Federal, State and Local Energy Tax Benefits
2. Public Utility Rebates
3. Insurance Savings
4. Energy Savings Analysis
5. Measurement & Verification
6. Cost Segregation
7. Financing
8. Carbon Credits

>>> GO GREEN. GET GREEN.
